Science and the outside environment

Our new topic is Light. Find out about sun safety
<https://www.bbc.co.uk/bitesize/topics/zdrrd2p/articles/zqn7y4j>

<h3>UV Light</h3> <p>Some UV rays are blocked by the ozone layer, but most of the UV light from the sun reaches us on earth.</p> <p>The amount of UV light that reaches us depends on different things. It is stronger at midday and in the summer. If there are no clouds there is more UV light. It also gets stronger nearer to the equator. The location can make a difference too - water, sand and snow all reflect UV light, making it stronger.</p> <p>UV light causes sun burn, wrinkles and skin cancer, damages the eyes and can change the colour of some materials.</p>	<h3>'Seeing' UV Light</h3>  <p>Work in a group to set up an investigation to see the effects of UV light.</p> <ol style="list-style-type: none">1. Cut out several shapes from black card.2. Place them on a piece of coloured paper, and position them in a sunny spot for a week.3. When you take the shapes off, you should see that the paper around the shapes has changed colour slightly.4. The paper under the shapes will still look the same.5. The UV light could not get to the paper under the shapes, so the paper under the shapes has not been damaged by the UV rays.
