Parents: 1-100 number squares are widely used in schools as they show children some of the natural patterns in numbers and enable them to investigate how numbers relate. If a child can fill in random sections of a number square as in these activities, they are showing a good understanding of number patterns and place value. If necessary, let your child have a glimpse of the whole number square, but encourage them to try and think about how number patterns change as you go across the rows (digits go up by one) or down the columns (tens go up by one).
